Summary

AI and systems engineer with experience developing and deploying real-time computer vision and edge computing solutions across cloud and embedded platforms. Strong hands-on background in Python, C++, Linux, Docker, NVIDIA Jetson, DeepStream, networking, and performance optimization. Experienced in translating applied AI requirements into experimental prototypes and production systems, with published research in efficient video analytics and particular interest in distributed edge infrastructure, resource-efficient computing, and systems research.

Skills

Programming: Python, C++, SQL, TypeScript

Systems & Edge Computing: Linux, Docker, NVIDIA Jetson, DeepStream, embedded Linux, cloud/edge deployment, device management

Distributed & Networked Systems: REST APIs, MQTT, RTSP/video streaming, distributed device communication, runtime monitoring

AI/ML: PyTorch, ONNX, TensorRT, computer vision, object detection, tracking, re-identification, model quantization

Performance & Experimentation: FP16/INT8 optimization, benchmarking, latency/throughput analysis, resource monitoring, hardware-specific performance evaluation

Experience

AI Engineer, MobiFone Solutions

Aug 2026 – Present

- Developing AI and computer vision solutions for drone and smart-city applications, spanning centralized/cloud services and edge inference deployments on NVIDIA Jetson platforms.
- Building real-time video analytics prototypes and deployment architectures that integrate AI inference, video processing, backend services, and distributed edge devices.
- Evaluating cloud-versus-edge deployment trade-offs with respect to latency, throughput, compute resources, and operational constraints.

AI Engineer (Contract), BeeBlast

Apr 2026 – Jul 2026

- Designed applied AI systems combining LLM-based classification, decision routing, external tools, APIs, structured data sources, and human-in-the-loop control.
- Developed backend components for maintaining system state, enforcing tool and workflow policies, and integrating AI models with production services.

AI Engineer (Edge AI), Viettel High Tech

Mar 2025 – Jul 2026

- Built and deployed real-time computer vision systems for surveillance and industrial applications, combining object detection, tracking, re-identification, and attribute classification.
- Developed C++ inference pipelines for NVIDIA Jetson, AXERA, and Rockchip platforms, including FP16/INT8 quantization, performance profiling, and hardware-specific benchmarking.
- Developed multi-stream NVIDIA DeepStream pipelines and supporting backend services for edge video analytics, device control, runtime monitoring, and remote system management.
- Implemented REST APIs in C++ using Poco and integrated networked services for managing inference pipelines and communication between distributed system components.

Intern Data Scientist, VU Political and Communication Group

Dec 2023 – Feb 2024

- Supported an academic research group by transforming unstructured research datasets into relational data systems and assisting with cloud migration to improve reproducibility, accessibility, and maintainability.

Publications

M. T. Vu, H. N. Vu, and H. L. Nguyen, "Anchor-Clustering: A Lightweight Efficient Method to Aggregate Human Attribute Prediction in Video Surveillance," *Pattern Recognition and Image Analysis*, vol. 36, pp. 45–56, 2026. doi:10.1134/S1054661825701287

Research Interests

Edge and distributed computing; resource-efficient AI systems; distributed AI inference; performance optimization; intelligent workload placement; cloud-edge systems; systems experimentation.

Education

Vrije Universiteit Amsterdam — BSc Artificial Intelligence (GPA: 7.2/10)	2021 – 2024
Hanoi – Amsterdam High School for the Gifted (GPA: 9.2/10)	2018 – 2021

Languages

Vietnamese (Native), English (Fluent), Dutch (Conversational)
